

The Bioremediation Facility at Klinkerstene Waste Park is an integral part of our holistic waste management offering. Dedicated to sustainable waste treatment, we apply natural microbial processes to remediate organic contaminants. By utilizing the windrow method, we create optimal conditions for microbial activity, ensuring efficient treatment of various waste types and minimizing environmental impact.

WASTE HANDLING

Contaminated soil or waste containing;

- Hydraulic oils
- Diesel and petrol
- Semi-volatile organic compounds (sVOC)
- Volatile organic compounds (VOC)
- Polycyclic aromatic hydrocarbons (PAHs)
- Other biodegradable and bio-available organic contaminants.

The effective treatment of such wastes through bioremediation require that appropriate environmental conditions are created in the windrowed wastes, in order to most optimally encourage the establishment and propagation of beneficial microbial populations.

SOLUTION BENEFITS

- Sustainable waste treatment method
- Reduction of environmental contamination
- Potential reuse of treated waste, promoting circular economy principles

We prioritize environmental consciousness and sustainability, providing access to compliant and sustainable waste management facilities that uphold the highest standards of environmental protection.

COST-EFFECTIVE. EFFICIENT. SUSTAINABLE.

Interwaste is a trusted leader in waste management, dedicated to ethical practices and environmental stewardship. With a focus on innovation and sustainability, we provide integrated solutions tailored to meet the diverse needs of industries, ensuring responsible waste management and environmental protection.
