## KLINKERSTENE EFFLUENT TREATMENT FACILITY

The Effluent Treatment Plant (ETP) represents a cornerstone of sustainable waste management at Interwaste. Engineered to the highest standards, our facility is designed to accept and treat various effluent waste streams, including leachate produced by our own facilities and liquid waste from diverse industries. With advanced technologies and meticulous processes, we ensure the effective treatment of liquid waste, recovering an impressive 80-90% as clean, reusable water.

Interwaste is committed to environmental stewardship and operating at the highest levels of safety and regulatory compliance. Our facility adheres to strict environmental standards and limits set by the Regulator. Clients can rest assured that their waste is safely treated and processed. Our purpose of serving land and life underpins our dedication to environmental protection and sustainable water management practices.

## WASTEHANDLING

- Liquid waste from industries such as manufacturing, mining, oil and gas.
- Leachate from waste management facilities.
- Any liquid waste stream will be sampled and tested prior to acceptance into the facility to ensure compatibility with the process and effectiveness of treatment and recovery.

## **FACILITY BENEFITS**

- Sustainable treatment of effluent waste streams
- Recovery of clean, reusable water for environmental conservation
- Compliance with legislation and regulatory requirements
- Circular economy solution re-purposing waste to protect and reduce our burden on fresh water sources.

## **COST-EFFECTIVE. EFFICIENT. SUSTAINABLE.**

Interwaste is a trusted leader in waste management, dedicated to ethical practices and environmental stewardship. With a focus on innovation and sustainability, we provide integrated solutions tailored to meet the diverse needs of industries, ensuring responsible waste management and environmental protection.
